DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Nathan Chaney on March 12, 2009.

The application has been amended as follows:

In the claims:

In claim 1, line 6, immediately after "...control system having", "a programmable" was deleted and —a processor programmed with a—was inserted.

In claim 1, line 7, "programmable" was deleted and —programmed—was inserted.

In claim 1, line 13, immediately after "...the set position at", "a programmed position" was deleted and —one of said programmed positions—was inserted.

In claim 13, line 3, immediately after "...a hydraulic control system", "enabling the" was deleted and —comprising a processor programmed to enable a—was inserted.

Claims 27-30 were canceled.

In the abstract:

The Abstract has been replaced with the following:

A selective position control system and method are disclosed. The system includes a processor, remote control and solenoid valve in conjunction with interacting valving, a potentiometer or ultra-sonic device and necessary wiring. The system interfaces wit the tractor's manual hydraulic lever operations which raise or lower equipment by effecting cylinder extensions or retractions. The system is separate from the tractor hydraulic system but interfaces by energizing a solenoid valve that stops oil flow and causes the manually detented tractor hydraulic valve to center from a working position. The system's processor establishes two programmed toggle switch

settings; one typically slaved to the other. The system accommodates other manually activated positions, up or down, from the programmed positions, with return to set points of programmed positions. The remote control incorporates a toggle device with three positions, an up/down rocker switch, a set switch and an LED readout.
